

# EVCHARGE

With the increase in EV models introduced by auto manufacturers combined with the desire to become less dependent on fossil fuels, consumers see EVs as a natural choice. From compacts to SUVs and pickup trucks, EV's are becoming commonplace in the market. Charging these vehicles at home requires an EV system that can either run off the grid from conventional electricity, or you can offset a portion of your home's electricity consumption by installing a solar array and battery storage unit.

EV CHARGE are your trusted professionals to install your charger or charger + solar + battery system. Contact us for a consultation.
